EDUCATION

Washington University in St.Louis   St.Louis, MO, USA
Ph.D. in Computer Science Advisor: Prof.Nathan Jacobs   *Aug. 2022 – May 2027(expected)*

Tianjin University   Tianjin, China
B.Eng. in Electrical and Information Engineering   *Sep. 2018 – June 2022*

RESEARCH EXPERIENCE

Graduate Research Assistant   August. 2022 – Present
Washington University in St.Louis   *Advisor: Prof. Nathan Jacobs*
- Research on image synthesis, diffusion models, especially on outdoor scenes.
- Research on stereo matching, depth estimation, optical flow estimation and domain adaptation.

Computer Vision Research Intern   Febuary. 2022 – May. 2022
OPPO Research Institute, Beijing, China   *Mentor: Dr.Bo Xu*
- Researched on image matting, proposed a framework to use human pose as guidance to achieve whole body matting.

Undergraduate Research Assistant   Jan. 2021 – Jan. 2022
Institute of Automation, Chinese Academy of Sciences, Beijing, China   *Advisor: Prof. Jinqiao Wang*
- Researched on model compression and network pruning, especially the application on Vision Transformer.

RESEARCH INTERESTS

I am broadly interested in computer vision and multi-modal learning, especially generative models and their application in autonomous driving and remote sensing scenes, including cross-view & novel view synthesis, birds-eye-view perception, and fundamental computer vision problems such as stereo matching, optical flow estimation, depth estimation and domain adaptation.

RESEARCH PROJECTS

Mixed-View Panorama Synthesis using Geospatially Guided Diffusion   03/2023 – 11/2023
Washington University in St.Louis   *Advisor: Prof. Nathan Jacobs*
- Use geospatial information to guide the diffusion model in mixed-view panoramas synthesis task.

Co-training for Stereo and Flow with Unsupervised Domain Adaptation   01/2023 – 05/2023
Washington University in St.Louis   *Advisor: Prof. Nathan Jacobs*
- Built an end-to-end joint learning framework to combine unsupervised domain translation with optical flow estimation and stereo matching in the absence of real ground truth optical flow and disparity,
- Applied novel constraints on the cycle domain translation process to achieve cross-domain translation with global and local consistency.
- Employed task-specific multi-scale feature warping loss and iterative feature warping loss during the training phase to regulate the training process in both spatial and temporal dimensions.

Vision Transformer pruning   03/2022 – 08/2022
Institute of Automation, Chinese Academy of Sciences   *Advisor: Prof. Jinqiao Wang and Dr. Xu Zhao*
- Based on L_0 regularization, we proposed a unified framework that jointly applied masks on MSA and MLP layers, which reduce the number of parameters of the model without breaking the original structure of the model.
- Transfered our proposed structured pruning framework to downstream tasks and get the state-of-the-art performance, which does not require consuming computation resources on training on upstream datasets.

Mobile AI 2021 Real-Time Camera Scene Detection Challenge | *Mobile AI Workshop @ CVPR 2021*
- Used two-stage fine-tuning method to improve the accuracy and the model pruning method to improve the model's efficiency.
- Used the float32-to-int8 quantization and model pruning methods to optimize our model.

Technical Skills

Programming: Python, C/C++, Java, Matlab
Deep Learning Frameworks: Pytorch, Tensorflow
Languages: English, Chinese
